

CREATIS SHOWER

Mobile autonomous shower

Hygiene, comfort and autonomy, anywhere

Opt for elegance, comfort, and technology with CREATIS SHOWER off grid shower : a mobile, autonomous stainless steel shower.

We designed this shower with a 60-liter tank to allow you to shower comfortably both indoors—during water or power outages—and outdoors.

The autonomous shower operates independently of municipal water and electricity systems.

Composition

- **Lower Section:** Includes a stainless steel water tank with a capacity of approximately 60 liters housed in a steel case. It contains essential components such as :
 - A 24V DC pump.
 - A 10 Ah battery.
 - Sensors, a contactor and a solar charge regulator.
 - A water heater compatible with photovoltaic panels.

- **Upper Section:** Features a classic shower panel with a rainfall showerhead and a handheld showerhead. This section is freestanding, eliminating the need for wall mounting, and securely attaches to the lower section via a stainless steel frame.

High Pressure and Autonomy

- **Consistent Pressure:** Up to 15 minutes of high-pressure water flow for 60 liters of water.

Ease of Use

- **Water Pressure:** Generated by a 24V electric pump powered by an integrated battery. You can choose the battery capacity based on your needs.
- **Water Heating:** Powered by an electric water heater with an integrated thermostat to regulate the water temperature in the tank. A sensor prevents heating if the tank is empty.

Additional Features

- **Showerhead/Handheld Diverter:** Allows switching between the two
- **Closed mixing circuit** (for bacteria-killing tablets)
- **Water Filtration:** Includes a built-in mechanical filter.
- **Drainage:** Equipped with a bottom valve for easy water disposal.
- **Mobility and Stability:** Can be bolted to the ground or equipped with wheels for easy movement.
- **Versatile Refilling Options:** Water can be poured through the top flap or the hydraulic system valve.
- **Hybrid Water Supply Option:** If cold water under hydraulic pressure is available, the system can supply hot water from the tank and cold water from the external system.
- **Battery Recharge Options:** The battery can be recharged using a power outlet or photovoltaic panels.
- **Adjustable Leveling:** Ensures stable placement on uneven surfaces.

Dimensions : 38 x 34 x 215 cm
